

Claims:

1 – 35. (Canceled)

36. (Currently amended) A method of coiling a medicament carrier in preparation for loading the coiled medicament carrier into a housing of a medicament dispenser, said carrier having the form of an elongate strip and having multiple distinct medicament doses carried thereby, the method comprising:

- (a) receiving the leading end of the elongate medicament carrier by a spindle; and
- (b) forming a coil of the elongate medicament carrier with the medicament doses therein on the spindle by rotating the spindle whilst moving the spindle and the elongated medicament carrier in a common lateral sense.

37 – 42. (Canceled)

43. (Previously Presented) A method according to claim 36, wherein the medicament carrier comprises blister pack form.

44. (Previously Presented) A method according to claim 43, wherein the medicament carrier comprises a peelable blister strip comprising a base sheet, in which blisters are formed to define pockets therein for contacting distinct medicament dose portions, and a lid sheet which is hermetically sealed to the base sheet except in the region of the blisters in such a manner that the lid sheet and the base sheet can be peeled apart.

45. (Previously Presented) A method according to claim 36 comprising associating the coiled medicament carrier with a retainer for retaining the coiled form.

46. (Previously Presented) A method of coiling according to claim 36, wherein [in] the spindle frictionally engages the elongated medicament carrier.

47. (Previously Presented) A method of coiling according to claim 36, wherein the end of the elongate medicament carrier is received within a slit provided to the spindle.
